Summary

Eddie AI is an AI video editing software for real or artificial generated footage. The idea is that you use real life footage or artificial footage and let Eddie create a great video, videoclip, trailer, short or anything really from the raw footage.

1. A collection of your brand identity that is used throughout your videos. You upload your Logo, your color scheme, sound tracks, fonts etcetera. This can then be used throughout your videos without you manually needing to edit this for each video
2. Taste: You can also import a collection of footage of which you like the style and you would like to replicate it. Then you can simply import example videos or any artifact really and ask your personal AI to use a specific style for your video. For instance the same font, colours, shock moments or anything basically.
3. Also it will be able to find mistakes you makes in a video and take that out of the video and solely focus on the good parts.
4. Eventually, you can of course make a digital twin, where you don't even need to create footage anymore
5. You
