□□ User Guide

Your friend or family member convinced you to join their Ente server ;) Well in this small guide we will help you to setup an account in no time and also provide you the basic tips and tricks on how to use it ;) Besides this written guide we also have a video guide that can be found on our DeterTube Shapps channel which can be accessed by clicking on the video below

1. Two Pieces of Information

If your friend invited you to join their Ente server then you should have received two pieces of information.

1. Ente Website Domain: This is the web application where you create your account and how you can access your photos through a web browser. As an example such a domain could look like

> **https://ente.examblebox.org**

2. API Domain: Once an account has been created than this will be the domain that you need to use to login to the Ente Phone, Tablet and Desktop Apps. As an example this could look like

> **https://api-ente.examplebox.org**

2. Creating an account

If you have received these two pieces of information then you are ready to create an account on your friends instance

1. The first step is using their Ente Website Domain and use your Web Browser on your phone or desktop to access it

2. You will then be shown the Ente website of your friend

3. Here you can check as well if all is correct because the API Domain is also presented in small white letters as can be seen on the screenshot below.

4. Then simply click on create a new account

5. You will then receive a confirmation code on the Email address you registered with

6. Fill in the code

screenshot

7. Then congratulations! Sweet you created your Ente account on your friends server

3. Mobile App

4. Desktop App

5. Mobile App Post Installation Steps

After you have logged into your friends server on the mobile application you will directly be presented with the following screen

This basically asks you to backup already existing Albums on your phone directly to Ente. This also means that all new pictures and videos you will make will be backed up as well.

6. Albums

6.1 Creating an Album

6.2 Adding Photos to an Album

6.3 Sharing an Album

7. Contacts

8. Sharing Albums

9. Sharing with Non Ente Users or Users on a different Instance

02. Configuration

05. Family Plan

Ente also allows you to share your storage with your family members. Then you are not limited to the 10GB that you get by default but but are limited to amount of storage your family member that created the family group provides you with.

1. You can have a maximum of 5 members in the Family account which including yourself is a total of 6 people.
2. You can only create one family group per account

To setup a new family group you do the following

1. Open up Ente
2. Click on the Hamburger menu in the top left corner
3. Click on Family
4. Then in the top right corner you can click on the three vertical dots ⋮
5. Then select create new Family Group
6. Give it a name
7. Then invite members by sending them an invitation email! Note that the email can end up in the SPAM so make sure you tell this to your family members if they cannot find the invitation email.

Then it is up to you if you want to give your family members limited storage of your total space or if all is shared and members can use as much as you the owner has to their capacity.
