01. Utils Porfolio Page Builder

This web application allows you to create a small portfolio website in now time. You can basically fill in your personal information and add your projects with a description. It is really minimal, but if you don't need more then it does the job. After, you filled it in, it will generate a standardized HTML template that you can then host on any webserver like Nginx or Apache ;) We will explain in this tutorial how to deploy it on Nginx after you have generated your Portfolio website.
